OR EMAIL. SALES@WEATHERWEAVE.CO.UK

Structure Wall Fixing:

The most popular method is fitting a keder rail to your structure. Walls are hemmed with keder bead for easy sliding and secured to the gazebo legs with turnbuttons. Alternatives include eyelets with bungee cords or screw-in fittings, depending on your design. Bottom batten pockets add weight, and ground bolts for bungees can help keep out bad weather.

Options:

Choose from window panels (full or half) with optional blinds for privacy, and additional zip doors that roll up independently. Share your design ideas and we'll create a solution tailored to you.

Give us a call or:

Take some pictures and measurements and email us at sales@weatherweave.co.uk or alternatively, come and visit us at our office in Rayleigh, Essex and we will be happy to talk through what solutions are best suited for your structure.

Contact: Weatherweave Ltd, 12-16 Hockley Road, Rayleigh, Essex SS6 8EB

Please Note: Our structure cover service does not include wind-out, and some shop-bought pop-up gazebos and parasols. In some cases, re-covering a pop up gazebo may not turn out to be the cost-saving option you were hoping for. We'll always give it to you straight. For honest advice and practical options, just give us a call. We're happy to talk through your setup and help you decide the best way forward.
